Asset Assist

A more efficient way to manage your waste management equipment

Asset Assist is an innovative equipment management tool that represents a step change in the way you access, manage and organise your waste management equipment (SMR) service, maintenance and repair activities.

As part of our Maintenance Management System we are now able to offer on-line access to customer specific historic maintenance and financial data for all Waste Management Equipment under a Service, Maintenance and Repair contract in a format which will allow users to analyse the data to monitor and make efficiency improvement within the specific area of Asset Management. This will allow you to benchmark all your SMR activity and identify areas of under performance and focus on areas for improvement to drive operational excellence.

As an innovator in providing Maintenance Solutions & Services to the waste management sector for almost 40 years, Equipserv is perfectly positioned to extend its expertise into the field of data management to help its customer to make more informed decisions based on a standardised suite of Management Information, which can be accessed on-line.

Reliable Information is essential to any business and with the introduction of Asset Assist, Equipserv can now provide you with the opportunity of viewing and accessing a suite of Industry standard data which will allow your business to monitor, track and analyse key operational/financial indicators for all equipment under a SMR contract to maximise operational efficiencies.

Asset Assist is an on-line management tool that will allow your business to access asset information for all your equipment irrespective of its location through a single easy to access interface on your PC.

The added value management tool

At Equipserv, efficient, timely management of equipment for increased productivity and reduced cost is central to our service.

For that reason, Asset Assist can be offered as an extra in all our maintenance contract agreements. This new addition to our service provides you with the tools you need to monitor, and manage SMR minimum cost.

Asset Assist's online application is easy and intuitive, reducing the time you need to access data and returning results, comparative figures, historical data and much much, more in a matter of seconds.

As a result, our teams have more time to focus on their key roles within your business.

A complete solution

Bring together your entire Asset register of waste management equipment – regardless of your provider.

Manage your SMR costs

Track key financial information including invoices, emergency call out costs and credit notes.

Asset Performance

Keep on top of the performance of your assets with a comprehensive suite of industry standard KPIs, which allow you to monitor equipment utilisation and cost.

Total Support

Access all paperwork through the Asset Assist dashboard including service agreements, condition appraisal forms and invoice templates. Our back office team will also be on hand for any help with queries or administrative tasks.
